

using Healthcare Analytics to transform lives

Key Attributes:

- Identifies substantial savings opportunities in network management
- Generates immediate return on investment in the area of clinical variation
- Provides comprehensive Population Health Management capabilities to improve quality of care while reducing unnecessary costs

OUR MODULES

PERFORM

The network/provider module analyzing network management, network design, clinical cost drivers, clinical variation, cost/quality fusion and physician/provider performance including financial, clinical, quality and patient satisfaction

INFORM

The clinical population management and care management module providing condition registries, gaps in care and supports the daily workflow of care managers including risk stratification

INTEGRATING CLINICAL AND CLAIMS DATA TO CREATE ACTIONABLE INFORMATION

EagleDream Health's innovative software solution provides detailed, actionable data that organizations and physicians need to address the "Triple Aim": Improving quality/outcomes, reducing costs and increasing patient engagement.

Developed in a clinical environment, our software has been thoughtfully developed into a sophisticated suite of analytic tools presented in an intuitive, contemporary and easy to use interface.

Our software integrates, synchronizes and standardizes multiple data sources into a powerful database that provides information across the entire continuum of care.

The data provides access to both clinical and claims data, creating a fusion of cost and quality that allows users to focus on the value and efficiency of care rather than utilization. Our modular system provides analytical dashboards and reporting tools for a variety of users across the entire healthcare continuum.

In the age of accountable care and increased competition, the efficient delivery of healthcare is paramount. Using our software, providers, hospitals, ACOs, self-insured organizations, insurers and regional health organizations can work to ensure patients receive the highest quality care at the lowest cost...all while reducing the overuse, underuse and misuse of medical services.
